

### Nobimpex Fetal Bovine Serum (South American Origin)

Source: Sourced from South America (OIE-certified BSE-free zones and approved by the Chinese government through rigorous trade country assessments). Each batch is accompanied by legally imported documentation and inspection/quarantine certificates issued by entry-port authorities, ensuring traceability and origin reliability. All serum sources comply with EDQM (European Directorate of Quality Medicines) certification.

#### Product Features:

Manufactured under cGMP standards.

Fully traceable origin.

Sterility ensured via dual 100nm sterile filtration.

Strict virus testing with test reports provided for all imported serum batches.

Single-use sterilization filtration process eliminates cross-contamination between batches or viral residue risks.

#### Applications:

Widely used for routine cell culture.

Provides essential nutrients for optimal cell growth.

More cost-effective compared to Australian/New Zealand-origin FBS.

Preferred choice for large-scale biopharmaceutical and vaccine R&D/production enterprises.
